

humidification services @ a glance

Poor home humidification can be the source of many problems including dry noses, scratchy throats, itchy skin and upper respiratory ailments. Many viruses and bacteria thrive in low humidity, increasing the susceptibility of you and your family to colds and the flu. It even causes static shock and damage to home furnishings. But dry air damage doesn't stop there. Walls and ceilings crack, wood floors warp, and window and door frames shrink, allowing cold outside air into the house, making your home less energy efficient. Dry indoor air even reduces the efficiency and effectiveness of your heating system.

the problem

During winter, home humidity levels are often four times less than recommended.

the solution

**humidification:
moisture matters**

ReensAir humidification systems are the most efficient and effective products on the market today. Proper Humidification Can:

- Reduce vulnerability to infection.
- Prevent dry, itchy skin.
- Relieve cold and allergy symptoms.
- Reduce unpleasant static electricity.
- Help protect your furniture, woodwork, & artwork.
- Save you money on your heating & cooling bills

A ReensAir humidifier continually monitors and responds to both outdoor temperatures and indoor relative humidity levels, delivering optimum levels of humidity throughout your home. Our humidifiers produce more than three times the amount of moisture than our competitors, using highly purified water instead of unpurified, stale tap water. Additionally, our humidifiers require no monthly cleaning or pad replacement, eliminating the risks associated with bacteria growth.

why reensair?

ReensAir offers you the most efficient, effective, advanced, and high-quality solutions to your home humidification needs because we care about the quality of the environment you live in. Help improve the comfort and health of your family by having an ReensAir humidification system installed. Using patented technology to introduce and evaporate moisture directly and more efficiently than any other home humidifier in the world, it adjusts to outside temperatures, providing optimum moisture levels throughout your entire home.
